

Instructions for Installation and Update of MBS Revit Waldram Software Version 5

- Required setup files can be downloaded from here.
<https://www.mbs-software.co.uk/downloads/waldramtools>
- Click Revit Version tab
- Download the installation package **Revit Waldram Tools 5.0 Setup.zip**
 - Please **Close Revit** and all **MBS** console services and wait for 60 seconds to allow the files to be released.
 - Unzip the files
 - The **setup.exe** must be with **Run as Administrator** option. This ensures future updates can be obtained without admin permission.
 - Change the Revit Year as desired.
 - It installs the .Net framework, some other dependencies and Waldram tools DLL and settings files.
 - The DLL files are copied to *Revit* folder in *Program data* commonly
C:\ProgramData\Autodesk\Revit\Addins\20XX\Waldram
 - The setting files are copied to the *MBS* folder in *ProgramData* commonly
C:\ProgramData\MBS Software\Revit Waldram Tools
 - The settings will be copied to user's AppData folder when any of the MBS dialog (Calculation, Register, Report, Label) is run. This allows the software to be used by multiple users without the need of re-updating the software on **per-user** basis.
 - Open Revit and Open **MBSUpdater** from any MBS Dialog Menubar > Help > Software Updates > Update to get recent updates. Restart Revit.
